

A big NO to Google's idiotic Wifi weather balloons.

Even the Dept. of the Interior finally realized that microwaves were messing with birds. If microwaves are messing with birds then WTF is it doing to us? I don't want Google's microwaves hitting me!

Also, do a search for weather balloons crashing. What goes up, must come down! Google's balloons (with equipment attached) can and will cause some serious damage, injury and loss of life when they come down “accidentally.”
